# Statistics and monetary policy

**“Nothing is more important for monetary policy than good statistics.”**

*Alexandre Lamfalussy, 1996*

**“When monetary policy measures cannot be justified and explained through statistical data, the measures will not be understood, and the executing institution will lose credibility.”**

# Communication as an instrument

**“Central bank communication is right at the heart of monetary policy. It is actually a monetary policy tool in itself. Even for those with little interest in central banking, it is difficult to avoid the pronouncements of one or the other of us in the newspaper.”**

*Mario Draghi, 2014*

# DIAGRAM OF THE CAUSES OF MORTALITY IN THE ARMY IN THE EAST.

2.  
APRIL 1855 TO MARCH 1856.

1.  
APRIL 1854 TO MARCH 1855.

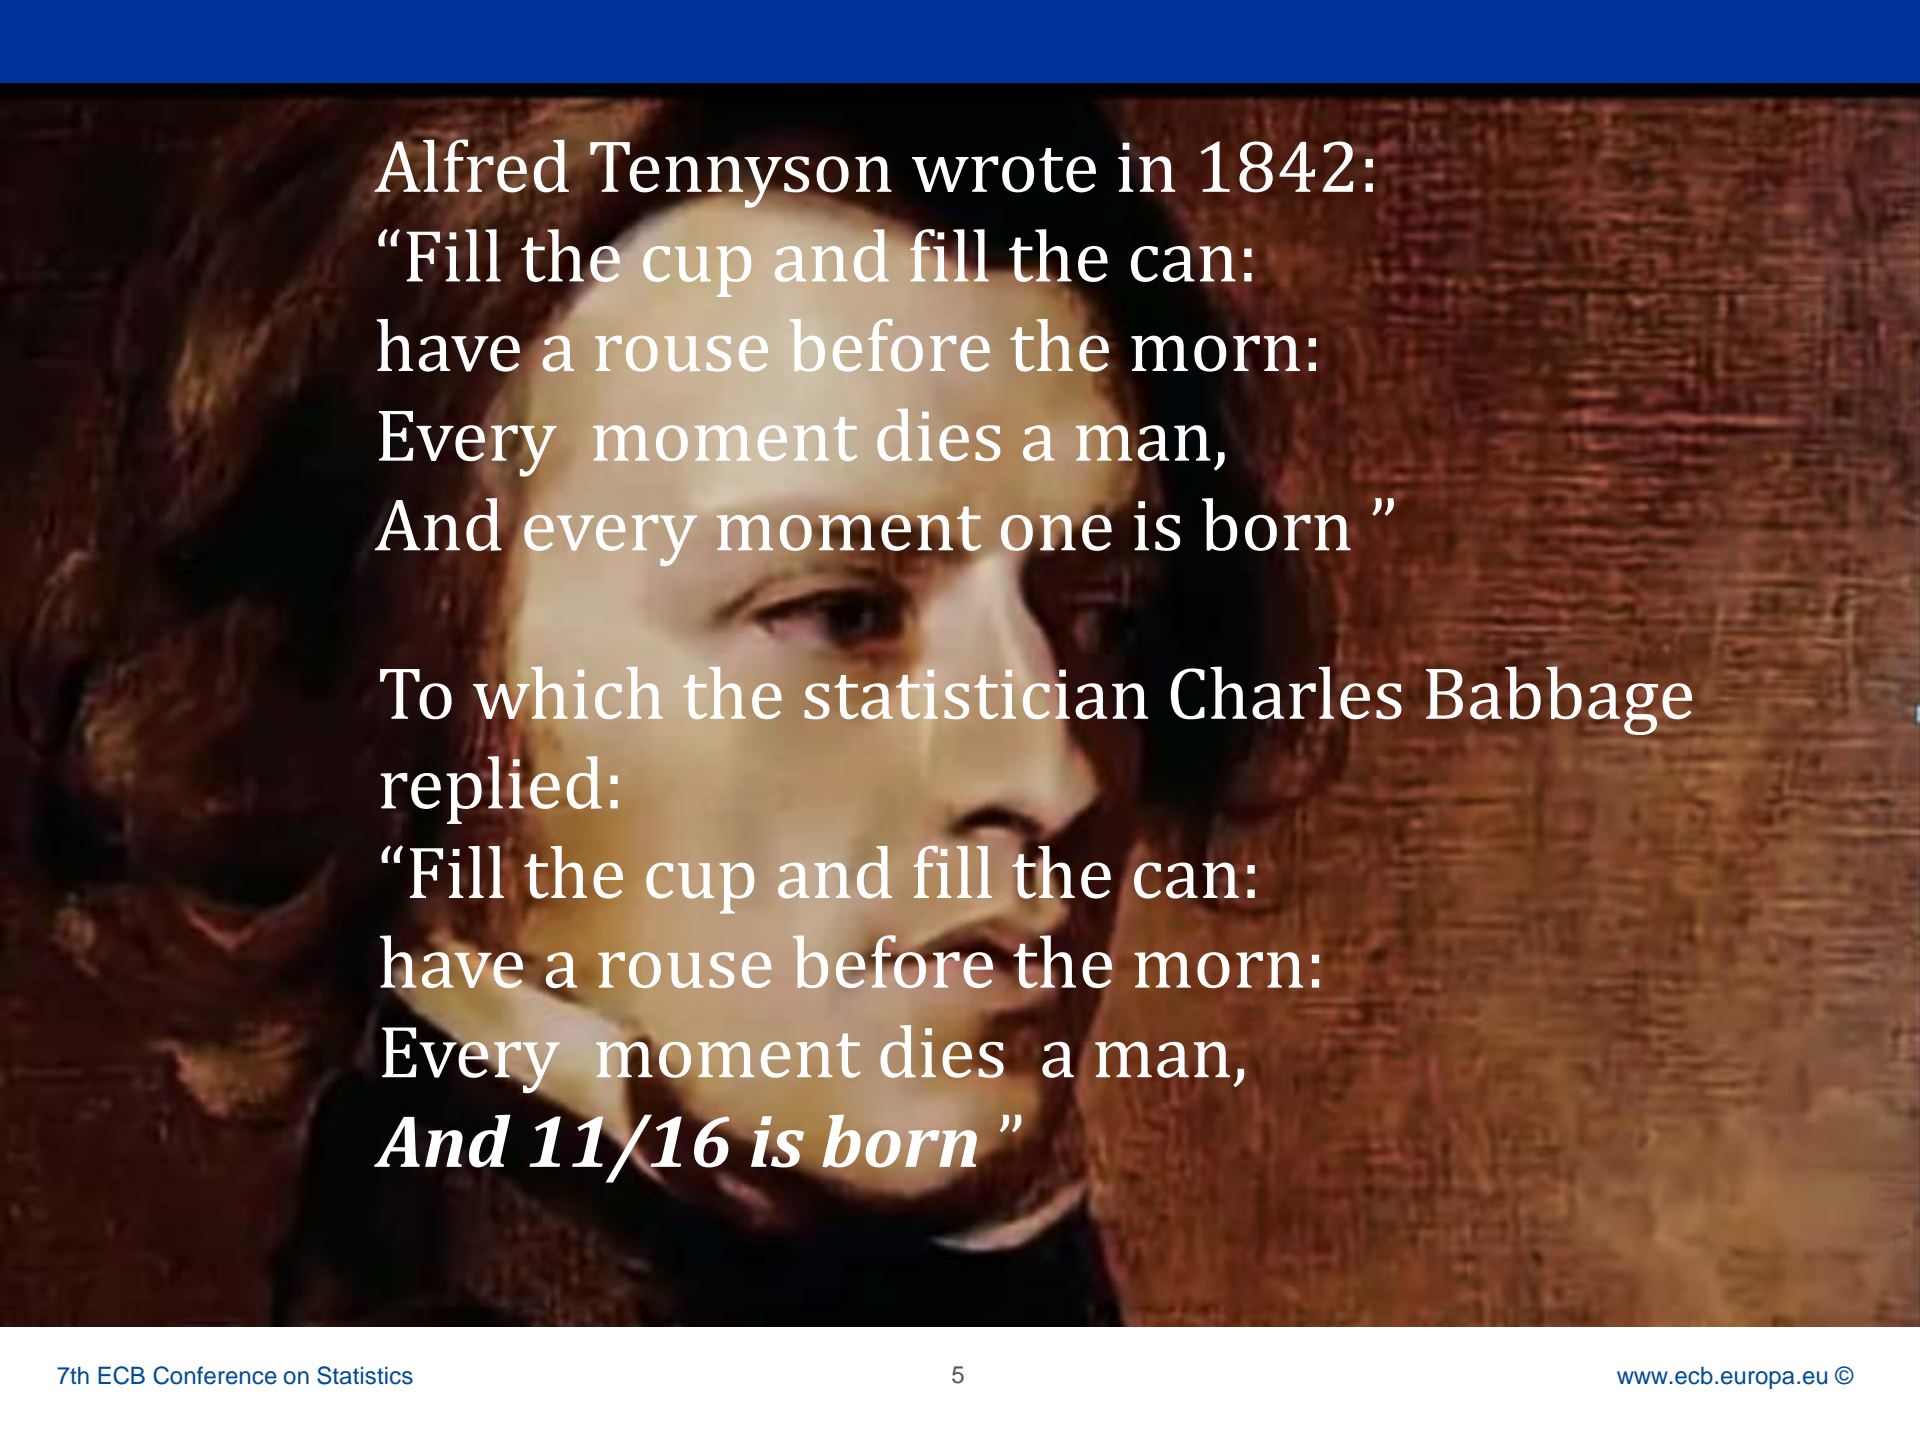

*The Areas of the blue, red, & black wedges are each measured from the centre as the common vertex.*

*The blue wedges measured from the centre of the circle represent area for area the deaths from Preventible or Mitigable Zymotic diseases; the red wedges measured from the centre the deaths from wounds; & the black wedges measured from the centre the deaths from all other causes.*

*The black line across the red triangle in Nov<sup>r</sup> 1854 marks the boundary of the deaths from all other causes during the month.*

*In October 1854, & April 1855, the black area coincides with the red; in January & February 1856, the blue coincides with the black.*

*The entire areas may be compared by following the blue, the red & the black lines enclosing them.*

A portrait of Alfred Tennyson, a man with dark, wavy hair and a serious expression, looking slightly to the right. The background is a textured, brownish-gold color.

Alfred Tennyson wrote in 1842:  
“Fill the cup and fill the can:  
have a rouse before the morn:  
Every moment dies a man,  
And every moment one is born ”

To which the statistician Charles Babbage  
replied:

“Fill the cup and fill the can:  
have a rouse before the morn:  
Every moment dies a man,  
***And 11/16 is born ”***

Home Prices

Home Equity

Home Affordability

About the Data

For the U.S., home prices have increased on a year-over-year basis for most of 2012 and 2013. As indicators of a national housing market recovery gain strength, is similar resilience manifesting for markets in New York, New Jersey, and Connecticut? We provide regional data that we anticipate will be valuable to policymakers, service providers and others, especially as they assess and undertake the process of recovering from Superstorm Sandy. The data show considerable variation across regional counties:

- In 35 percent of counties, mainly in upstate New York, median home prices reached the peak levels of 2006.
- 79 percent of counties have experienced a rise in home prices during the last 4 quarters, possible evidence that local housing markets may have bottomed.
- Lower home prices may have increased home affordability across the region. For example, median households could afford the median home in 86 percent of the counties in 2011 as compared with 59 percent of counties in 2006.

Have home prices recovered?

Where are home prices today relative to past years?

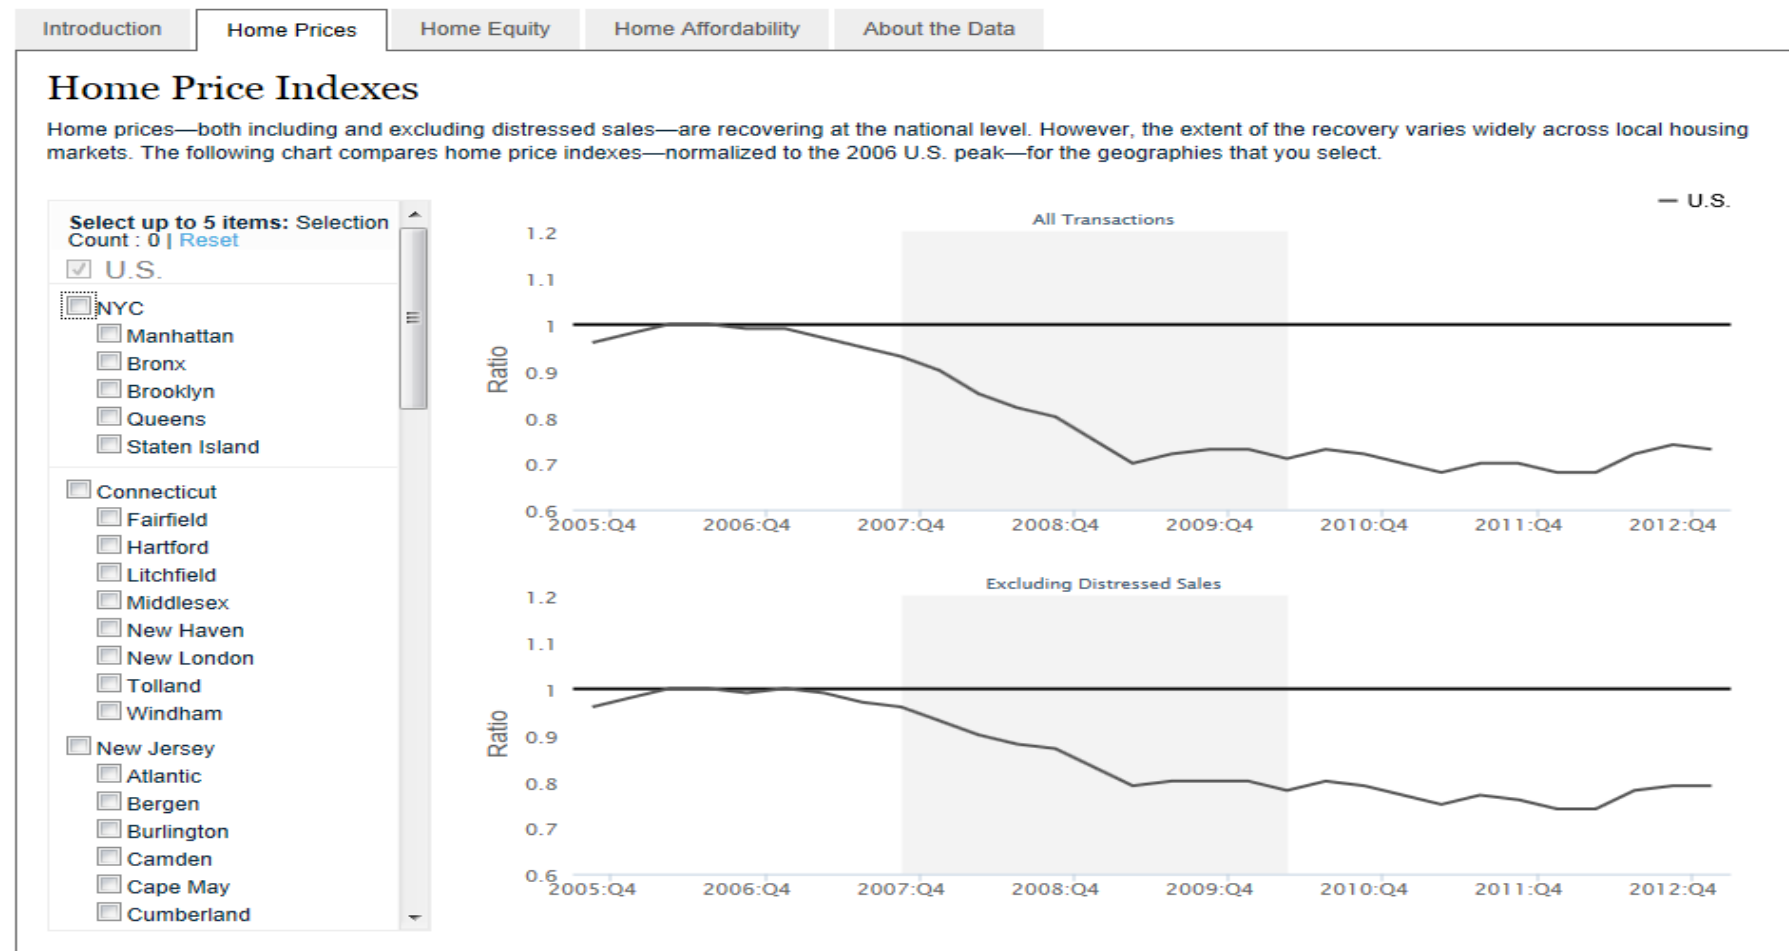

What is the effect of home price changes on affordability?

Home Affordability

About the Data

### Median home prices in 2013 relative to past years

A property's location and year of purchase influence a homeowner's equity position. This interactive map examines this connection by comparing county-level median home prices as of the first quarter of 2013 to previous years. For example, select a year on the timeline and a green color indicates that prices in that county in 2013 Q1 are higher than those in the selected year; similarly, counties with lower prices are colored dark grey.

- 2013 prices higher than 2006 prices
- 2013 prices lower than 2006 prices
- Insufficient data

# Statistics and Communication

- Statistics are a pre-requisite for monetary policy.
- Communications is becoming a monetary policy tool in itself.
- This influences as well the way of displaying and presenting statistical data.
- Statistics can be seen as becoming an own communications channel.

“To understand God's thoughts  
we must study statistics,  
for these are the measure of his purpose.”

*Florence Nightingale*
